Amendments to the Claims

Please amend Claim 4. The Claim Listing below will replace all prior versions of the claims in the application:

Claim Listing

- 1. (Previously presented) A sanding system comprising:
 - a) a relatively rigid rectangular backing plate having a pair of opposed parallel ends and first and second opposed surfaces, and provided on said first surface with a handle and means to support a sanding pad on said second surface;
 - b) a deformable sanding pad having rectangular dimensions similar to those of the backing plate and a thickness that is not greater than the shorter of the rectangular dimensions, having abrasive grains adhered to the pad thereby forming at least one sanding surface, and having a pair of opposed parallel ends wherein at least one of the pair of parallel ends comprises a groove; and
 - c) at least one retaining member in communication with the backing plate having a generally L-shaped cross section with a plurality of projections extending from an end of the generally L-shaped cross section adapted at one end to pierce a side of the deformable sanding pad in the thickness direction through at least a portion of the groove.
- 2. (Original) The sanding system according to Claim 1 in which the sanding pad is formed from a resilient open-celled foam.
- 3. (Original) The sanding system according to Claim 1 in which the sanding pad is formed from a polyurethane foam.
- 4. (Currently amended) The sanding system according to Claim 1 wherein at least a portion of the generally L-shaped cross section of the at least one retaining member is generally parallel with at least a portion of the groove in the sanding pad.

- 5. (Original) The sanding system according to Claim 1 in which the sanding pad has from two to four sanding surfaces.
- 6. (Original) The sanding system according to Claim 5 in which the sanding surfaces of the sanding pad have different sanding characteristics.
- 7. (Previously presented) The sanding system according to Claim 1 in which the at least one retaining member is formed integrally with the backing plate.
- 8. (Previously presented) The sanding system according to Claim 1 in which there are two retaining members.
- 9. (Original) The sanding system according to Claim 1 wherein the handle is detachable.
- 10. (Original) The sanding system according to Claim 9 wherein the detachable handle is replaced with a pole sanding mechanism.
- 11. (Previously presented) A pad for a sanding system for sanding a surface, the sanding system having a relatively rigid rectangular backing plate having a pair of opposed parallel ends and first and second opposed surfaces and provided on said first surface with a handle and means to support a sanding pad on said second surface, and at least one retaining member in communication with the backing plate having a generally L-shaped cross section with a plurality of projection extending from an end of the generally L-shaped cross section, the pad comprising:
 - a) rectangular dimensions similar to those of the backing plate;
 - b) a thickness that is not greater than the shorter of the rectangular dimensions;
 - c) abrasive grains adhered to the pad thereby forming at least one sanding surface; and
 - d) a pair of opposed parallel ends wherein at least one of the pair of parallel ends comprises a groove.

- 12. (Original) The pad according to Claim 11 in which the pad is formed from a resilient open-celled foam.
- 13. (Original) The pad according to Claim 11 in which the pad is formed from a polyurethane foam.
- 14. (Original) The pad according to Claim 11 in which the pad has from two to four sanding surfaces.
- 15. (Original) The pad according to Claim 14 in which the sanding surfaces of the sanding pad have different sanding characteristics.
- 16. (Previously presented) The pad according to Claim 11 in which the sanding system comprises two retaining members and both parallel ends of the pad comprise a groove.
- 17. (Original) The pad according to Claim 11 in which the pad has a first opposed surface and a second opposed surface offset from the first opposed surface forming a trapezoidal shaped pad.
- 18. (Original) The pad according to Claim 11 in which a portion of the pad under the groove is any geometric shape.
- 19. (Original) The pad according to Claim 11 comprising a first material and a second material.
